SIMILARITY: Belongs to the fabH family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    [acyl-carrier protein].

PATHWAY: Fatty acid biosynthesis.

SUBUNIT: Homodimer (By similarity).

SUBCELLULAR LOCATION: Cytoplasmic (Probable).

DOMAIN: The last Arg residue of the ACP-binding sit for the weak association between ACP/acpP and fabH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         initiates fatty acid synthesis and may therefore play a role in governing the total rate of fatty acid production. Possesses botl acetoacetyl-ACP synthase and acetyl transacylase activities. Its substrate specificity determines the biosynthesis of branched-chain and/or straight-chain of fatty acids (By similarity). CATALYTIC ACTIVITY: Acyl-[acyl-carrier protein] + malonyl-[acyl-carrier protein] + CO(2) +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SWISS-PROT entry is copyright. Mus musculus 13 days embryo lung cDNA, RIKEN full-length enriched
library, clone:D430047D13 product:DEAD/H (Asp-Glu-Ala-Asp/His) box
polypeptide 10 (RNA helicase), full insert sequence. (Fragment)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -I- SIMILARITY: Belongs to the DEAD box helicase fa

"Molecular analysis of the chromosomal breakpoints and id
of the repetitive sequences near the breakpoints of NUP98
related leukemia with inv(1)(p15q22).";
Submitted (MAR-2000) to the EMBL/GenBank/DBJ databases.
-!- FUNCTION: Putative ATP-dependent RNA helicase.
-!- TISSUE SPECIFICITY: High in testis but widely express
-!- SIMILARITY: Belongs to the DEAD box helicase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 HUMAN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SEQUENCE FROM N.A.

No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         seq
